Dear Colleagues and Friends,

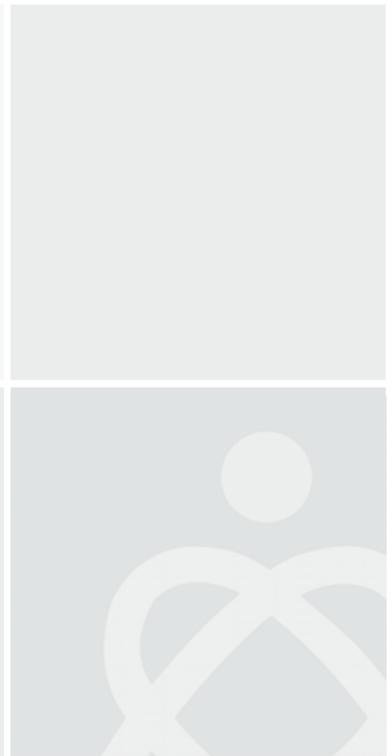

It is my great pleasure and honor to invite you to the 2nd Asia-Pacific Congress of Pediatric Cardiology and Cardiac Surgery to be held in Jeju Island, Korea, from May 27 to 30, 2008. The programs include topics on many aspects of congenital heart disease, given as state-of-the art lectures, debate session with electronic voting system, mini-symposiums, luncheon sessions, as well as abstract and poster sessions. Pre-congress half-day optional course will allow you to update your knowledge on new developments in congenital heart disease. We will also have a special video-presentation session for reviewing pathology specimens of various congenital heart diseases, which will be displayed throughout the congress. Invited speakers include world experts on every aspect in this field.

Jeju is the most beautiful island in Korea and various sporting events on seaside and mountains during and after the congress are provided. For those who would like to explore Korea more, we will provide an optional tour to many tourist attractions and shopping places in and around Seoul. I can assure you that you will have a life-time experience in Korean culture, music, sports, as well as an excellent scientific meeting.

As the Asia-Pacific region is becoming increasingly important, assuming greater responsibility in the world in recent years and surely for many years to come, I am particularly excited to host this important meeting in Korea. I am also hoping that this renewed tradition of PCCS will continue in future. I welcome you to come to Jeju Island, Korea and to bring friends, colleagues, trainees, and family along with you.

ABOUT KOREA & JEJU ISLAND

Dynamic Korea

Korea in northeast Asia is a nation that boasts a fast growing economy and a lifestyle that brings together the old and the new. Despite all such enthusiasm for modernization and globalization, Koreans still greatly value their 5,000 years of history and beautiful nature, being an attractive destination for business travelers and vacationers alike. "Hallyu", also known as "Korean Wave" is Korean pop and traditional culture, growing its popularity overseas. Famous spots that appeared in Korean dramas and movies attract foreign visitors all year around. Korea's long heritage and inspiring scenery impress all visitors with uniqueness and charm. Please visit Korea and discover the many wonders Korea has to offer.

Fantasy Island, Jeju!

Jeju has a mild oceanic climate throughout the year with the smallest annual temperature range in the country. The temperature for the hottest summer months averages no more than 34.7°C and no less than -1.5°C in winter. The island is 73km wide and 41km long. The volcanic eruption that took place approximately 25 thousand years ago created the crater lake, Baekrok-dam, at the summit of the mountain. Mt. Halla rises in the center of Jeju to 1,950m above sea level. The rest of the island slopes down from its summit and is covered with dark gray volcanic rocks and volcanic ash soil. Relatively isolated from the rest of the world, the island's nature has been well preserved in its prehistoric state. That is why traveling to Jeju is to travel back in time. Jeju's natural environment has been preserved as best as possible. The fantastically shaped rocks decorating the seashores, the hundreds of Oreums (secondary volcanoes) and the rarest species of flora around the Baekrok-dam lake are all treasures waiting to be discovered by visitors. One cannot see Jeju unless one looks. It is like seeing only trees before entering a forest. We invite you to explore Jeju Island.
